

Agency Reporting Automation Check

12 questions to find out how many billable hours your agency is losing to manual client reporting — and which part of your stack to automate first.

01 • REPORT BUILDING TIME

- ☐ Can you produce a client's monthly report in under 30 minutes, from raw data to delivery?
- ☐ Do you know exactly how many hours per week your team spends building reports — without estimating?
- ☐ Is report data pulled automatically, or does someone manually copy numbers into a doc or slide deck?
- ☐ If a client asked for a report right now, could you deliver it in the next 10 minutes?

02 • DATA BLENDING & RELIABILITY

- ☐ Can you combine data from 2+ platforms (Google Ads, Meta, GA4, etc.) in one report without exporting to a spreadsheet first?
- ☐ Has a client ever caught a number in your report that didn't match their own dashboard?
- ☐ Do your dashboards ever go stale or disconnect without anyone noticing until a client asks?
- ☐ Can you add a new data source to an existing report template without rebuilding it from scratch?

03 • CLIENT CUSTOMIZATION / WHITE-LABEL REUSE

- ☐ When you onboard a new client, do you build their report from zero, or duplicate a system that already works?
 - ☐ Can you rebrand a report with a client's logo and colors in under 5 minutes?
 - ☐ If you manage 10+ clients, do all their reports run on the same underlying system, or is each one a one-off?
 - ☐ Could someone else on your team maintain your reporting system without you walking them through it?
-

HOW TO SCORE

Count your "no" answers per category. 0–1 "no" in a category means that area is under control. 2 or more "no" answers in a single category is your biggest gap — the one costing you the most billable

time right now.

01 · Report Building	Hours per week rebuilding the same report by hand	Automated Report Builder
02 · Data Blending	Numbers that don't match, dashboards that go stale	+ Multi-Source Data Blend
03 · Client Customization	Starting from zero on every new client onboarded	+ White-Label Template System
6+ "no" across all categories	All three, compounding	Full package (base + both add-ons)

WHAT THIS FIXES

This isn't a generic automation pitch. Every gap above maps to a documented limitation in the reporting tools agencies already use — things like dashboards that can't blend more than one data source cleanly, or templates that have to be rebuilt from scratch for every new client instead of being reused. The fix is a reporting system built on n8n: it pulls from your ad platforms and analytics automatically, blends them into one dashboard, and reuses the same underlying template for every client — rebranded in minutes, not rebuilt from zero.

Built by an IT automation specialist with 20 years running systems at IBM, Kyndryl and Euronext Securities — now applied to agency reporting stacks instead of enterprise infrastructure.
